2009 Harvest Programs

Delayed Price: 18 cents for 90 days and 4 cents per month there after until October 15th of 2010, if not priced by Oct 15 bushels will be rolled into new crop DP contract. Corn will be shrunk and dried starting at 15% moisture. Same charges for beans.

Warehouse Receipt: Corn will be shrunk and dried starting at 14% moisture. There will be a 10 cent in charge and a 4 cent per month. These per month charges will be prorated to the day. Nine months of storage must be prepaid for this program. If grain is sold before the nine months, the balance of storage will be credited back to the producer. Same charges for beans.

Short Term Open Storage: Grain can be placed in open from Friday to Friday for free. If the elevator is not told what to do with the grain by Friday at noon that grain will be placed on a **Delayed Price Contract**.

Producers that place grain on Delayed Price lose beneficial interest of that grain.

We must know; **Who's grain it is, Splits of that grain(if any), and what is to be done with the grain before the load can go on to the scale.** With this proper information it will help speed up dumping time. Once the grain is sold it cannot be changed. When picking up your tickets make sure all information is correct.

All Storage programs and discount tables subject to change at any time.
