MxVision WeatherSentry Online®
Quick Reference Card

Weather Viewer

In the Weather Viewer, the data you need is customizable.

Weather

Access Layers

1. Choose the Layers Menu.

Layers

2. Slide over one of the layer groupings.

3. To view a layer, select the checkbox in front of the layer name.

Selected layers are listed in Layer Settings.

Layer Settings

Deselect a layer to remove it from the map. The listing will be moved to the recently viewed section where it may be easily accessed. By design, some layers are mutually exclusive.

Layer Settings
- Base Map
- User Locations
- Radar

Layers may have additional options which are found by accessing the arrow to the left of the layer. Layer legends are found to the right of the layer.

Animate Layers

Some layers may be animated. Select the Play icon to start an animation loop. Modify settings under the animation preferences arrow.

Layer Details

Most layers have additional information available. Simply hover, tap or click on the map to view this information.
Alerting

Under the Settings Menu select criteria which when exceeded will generate an alert and cause the View Alerts icon to flash. An audible alarm may also be sounded on your desktop.

View Alerts

Alert Criteria

It is advisable to set the alert criteria for your default location first, as locations created afterward will automatically use the same criteria. Don't forget to configure recipients if you want to receive the alert remotely.

Alerts
- Alert Criteria
- Manage Recipients

1. Under Alerts select Alert Criteria.

2. Choose a location. Roaming locations are used in SmartPhone.

3. Enable your alert criteria for each location. Lightning and PrecipTimer® settings are universal.

4. Save your changes.

Alert criteria may be edited at any time.

Remote Alerting

Mobile devices (text message), email or desktops can all be set as recipients to receive alerts generated by your criteria. The number of recipients is unlimited and group addresses may be used.

1. Select Manage Recipients.

2. Choose New. Name the device using the Recipient field.

3. Pick the device type and complete the remaining fields.

4. Save your changes.

5. In the Alert Criteria screen add the recipient to one or more locations.

MxVision WeatherSentry® SmartPhone and Roaming Alerting

Access your time-critical Schneider Electric weather information that you rely on each day from your App-enabled cellular phone.

While roaming, you can quickly access alerts, current radar, PrecipTimer, lightning (optional purchase) and hourly and daily forecasts for your current location or any of your saved locations while you are away from the office or your computer.

Customize your lightning alerts, including all clear notifications of when it's safe to resume activity for your roaming location (GPS position) and fixed locations of concern.

Access the most accurate forecasts with the industry's top-rated precipitation forecasts for the past six years running.

Tablet

All of the features that you love in MxVision WeatherSentry Online® are also available on your tablet by simply using your tablet browser. With innovative hybrid technology you have easy access with a browser and the mobility of the tablet so you can check your alerts, the forecast and view your customized layered maps while on the go. The dashboard gives you quick access to weather information for any of your locations.

MxVision WeatherSentry Online

Schneider Electric offers specialized features used by various industries, such as transportation, water and energy.
